Project Part 2: Relational Database

3. tConst -> {titleType, originalTitle, primaryTitle }

nConst -> {writer, director, primaryName, birthYear, deathYear}

genre -> {isAdult}

episodeNumber -> {seasonNumber, tConst, parentTconst}

4. We decided to base most of our database in relation to the Title of the movie/show, and are assuming that an 'episode' doesn't specifically refer to an episode of a show, but also a movie, documentary, etc. So it may or may not have a seasonNumber or episodeNumber, which is why we marked those as optional.
